PROFILE

3rd-year Computer Science student at FAST-NUCES Islamabad seeking a Software Development internship. Skilled in C++, Java, SQL Server, and Object-Oriented Programming (OOP), with hands-on experience in 5+ academic projects including desktop applications, x86 Assembly programming, and network simulation. Strong foundation in software design and database systems, focused on writing efficient, clean, and well-structured code.

EDUCATION

Bachelor of Science in Computer Science
FAST National University of Computer & Emerging Sciences, Islamabad | **2023 – Present**

(Expected 2027)

TECHNICAL SKILLS

Languages: Java, C++, HTML, CSS, x86 Assembly Language

Frameworks / Libraries: JavaFX, SFML

Databases: SQL Server (SSMS)

Tools & IDEs: IntelliJ IDEA, Visual Studio, SSMS, draw.io (UML), Cisco Packet Tracer, Git, GitHub

Additional: Wireshark, Unity (Game Development), XAMPP

Core Concepts: OOP, Data Structures & Algorithms, OS, Computer Networks, Database Design

PROJECTS

Events and Venue Booking System (Group Project) | Java, JavaFX, SQL Server, UML | 2025

- Built a desktop application for managing events, venues, bookings, scheduling, and attendee records using Java and JavaFX.

- Followed the full SDA process — defined actors and use cases, and created use case diagrams, class diagrams, system sequence diagrams, and sequence diagrams using draw.io.
- Implemented the application based on the design artifacts, keeping the code structure consistent with the class hierarchy and interaction flows.

Network Design and Simulation Project |Cisco Packet Tracer, Routing Protocols | 2025

- Designed and simulated a multi-layer network topology in Cisco Packet Tracer, with OSPF, EIGRP, and RIP routing protocols configured across multiple networks.
- Used VLSM subnetting, DHCP, NAT, and ACLs to handle IP address allocation and control network access.
- Set up communication between routers and switches across multiple networks and tested end-to-end connectivity with basic security rules applied.

Multi-Game Console System (Group Project) | C++, OOP | 2024

- Built a multi-game console in C++ that supports Snake, Hangman, and Wordle within a single unified system using OOP.
- Designed a class structure that allows easy game switching and keeps each game's logic and state separate from the others.
- Implemented complete game logic for each title including input handling, win/loss conditions, and score tracking within a shared game loop.

Zuma Deluxe Clone | x86 Assembly Language | 2024

- Built a fully functional Zuma Deluxe clone in x86 Assembly, implementing the complete game loop using low-level hardware instructions.
- Handled ball movement, color-matching collision detection, and chain-reaction logic using CPU registers and direct memory operations.
- Optimized performance through efficient stack usage, interrupt handling, and careful memory management.

Centipede Arcade Game | C++, SFML | 2023

- Built a Centipede arcade game in C++ using SFML as a first-semester project with foundational programming knowledge.
- Implemented enemy movement, collision detection, and scoring system using basic C++ concepts including functions, arrays, and pointers.
- Designed the game flow and logic using structured programming without object-oriented design.
-

ONGOING PROJECTS

1. C++ OS-based game applying multithreading and process scheduling concepts (CPU scheduling algorithms, synchronization).
2. Hospital database system using ER/EER modeling, normalization, and SQL Server with PHP-based front-end forms and reports.
